MEZO BUILDATHON · WAVE 1 / ACCESS & DISTRIBUTION

Know the state. Before the transaction.

MUSD Signal Glass — a public, zero-key Mezo stablecoin and allowance preflight dashboard.

Live deployed app | Mainnet MUSD | Open-source | No wallet access

THE USER PROBLEM

MUSD data exists. Understanding it is harder.

Contract identity

Which token and chain am I really inspecting?

Pool reserves

How much MUSD and mUSDC are visible at a particular block?

Wallet exposure

What is a public address's MUSD balance and spender allowance?

False confidence

A reserve ratio is not a price oracle or executable swap quote.

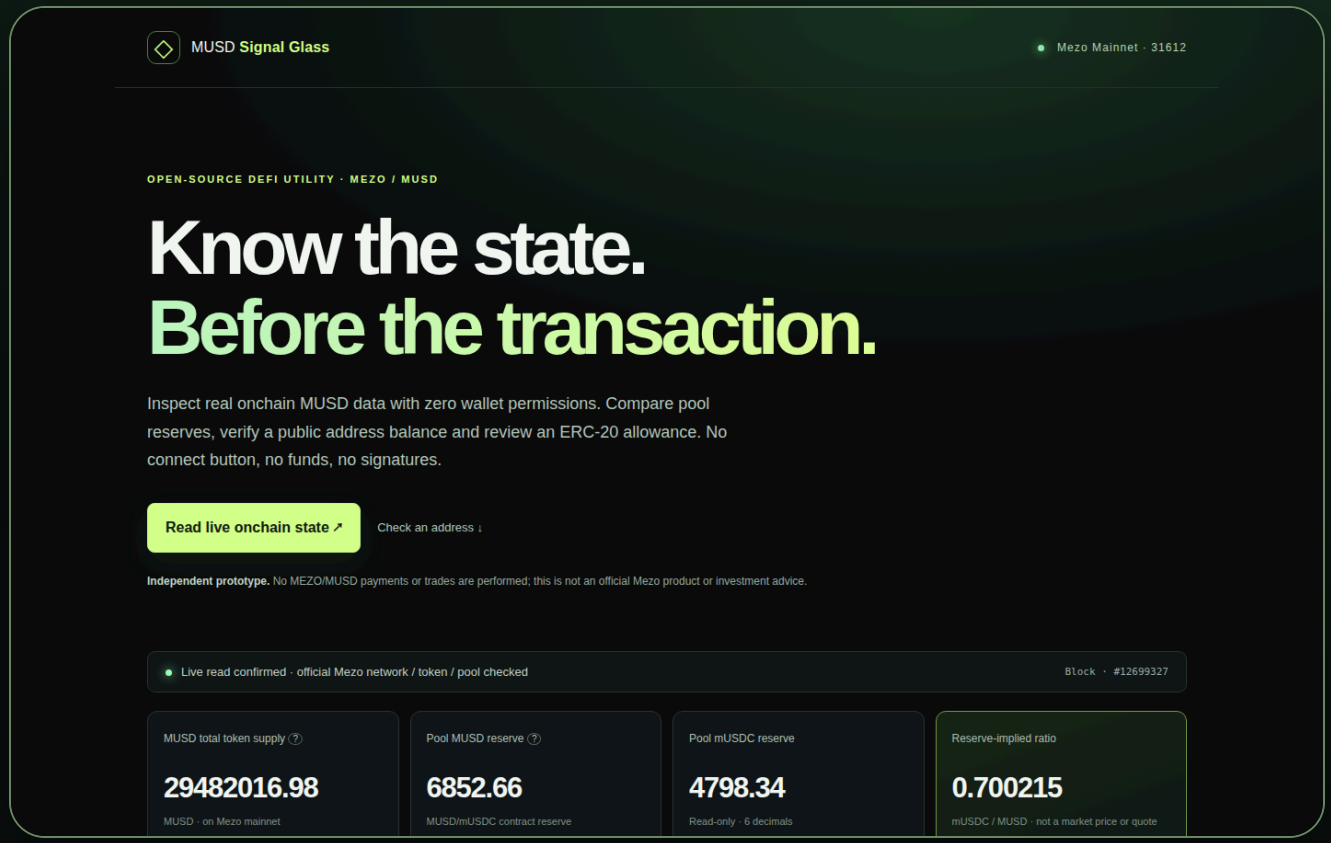

ALREADY LIVE ON A PUBLIC URL

A useful tool, right now.

One click pulls public MUSD token supply and MUSD/mUSDC pool reserves.

Enter an optional public address to inspect balance and a specific ERC-20 allowance.

No Connect Wallet. No approval. No gas.

REAL MEZO INTEGRATION

Public chain → deterministic evidence

1 · Pin chain

eip155:31612
Choose a block.

→

2 · Verify

Official token, pair, decimals & bytecode.

→

3 · Read

ERC-20 supply, reserve balances, approvals.

→

4 · Explain

Evidence, source, limits, zero signatures.

Fail-closed on wrong chain, token, ABI shape or decimals. The RPC method allowlist contains reads only.

A VERIFIABLE HISTORICAL BLOCK, NOT A FORECAST

Numbers backed by real reads.

Observed ERC-20 total supply

29,482,016.98 MUSD

MUSD/mUSDC pool reserve

6,852.66 MUSD

Paired reserve

4,798.34 mUSDC

Raw reserve-implied ratio

0.700215 mUSDC/MUSD

Pinned Mezo block #12,699,128 (Oct 23, 2026). Token supply is NOT circulating supply. Reserve ratio is NOT a market price, quote, opportunity to arbitrage or peg-safety verdict.

WHY IT BELONGS IN ACCESS & DISTRIBUTION

Lower the barrier to MUSD.

- Public link — works on any modern browser, no installation.
- Read-only preflight before touching a wallet or collateral.
- Explicit MUSD and mUSDC pool integration on Mezo mainnet.
- Open source + deterministic tests; no hidden private API.
- Next: documented safety checks for a user-guided MUSD workflow.

> Current project: free, no customers and no monetization. Potential next phase is a user-tested developer integration, not a promised revenue stream.

LIVE DEMO · PUBLIC SOURCE · REPRODUCIBLE TESTS

Try it.
Check the evidence.
